

⚠ BREAKING CHANGES

- For native ECMAScript Module (ESM) usage in Node.js only named exports are exposed, there is no more default export.

```
-import uuid from 'uuid';  
-console.log(uuid.v4()); // -> 'cd6c3b08-0adc-4f4b-a6ef-36087a1c9869'  
+import { v4 as uuidv4 } from 'uuid';  
+uuidv4(); // => '9b1deb4d-3b7d-4bad-9bdd-2b0d7b3dcb6d'
```

- Deep requiring specific algorithms of this library like `require('uuid/v4')`, which has been deprecated in `uuid@7`, is no longer supported.

Instead use the named exports that this module exports.

For ECMAScript Modules (ESM):

```
-import uuidv4 from 'uuid/v4';  
+import { v4 as uuidv4 } from 'uuid';  
uuidv4();
```

For CommonJS:

```
-const uuidv4 = require('uuid/v4');  
+const { v4: uuidv4 } = require('uuid');  
uuidv4();
```
